Introduction

This Appendix to the annual Report on Funded Research and Sponsored Programs of the Office of Research and Sponsored Programs (ORSP) is a more detailed account of external funding awards received in FY 2006 represented in the following tables:

- *Table 1* provides a comparative summary of awards to the University in FY 2005 and FY 2006 by significant funding source in descending order by total dollars received.
- *Table 2* is a comparative summary of awards to the University by administering units in descending order by total dollars received.
- *Table 3* is a comparative list of awards to the University by campus. Under each campus is a summary of awards by administering units listed in alphabetical order.
- *Table 4* is a comparative summary of awards by discipline in descending order by total dollars.
- *Table 4a* is a comparative summary of awards by discipline. Under each discipline, the total dollars generated by each administering unit is shown in alphabetical order.
- *Table 5*[†] provides a complete listing, by administering unit and principal investigator, of each grant or contract awarded during the last fiscal year.

Please note that multi-year projects are reported as either a one-lump sum or on a year-by-year basis. This is dependent upon when funds are received from the sponsoring agency. In order to have an independent determinant of the award period, the dates indicated in the granting agency's award document is used when reporting the award period in Table 5.

It is important to note that the listings of awards in the Tables understate the actual achievement of the University and its faculty in obtaining outside funding because they omit several important categories that are neither monitored by the ORSP or administered financially by the Controller's Division of Grants and Contracts Accounting as some funding is received directly by faculty or their departments. Funds received for research that are not reported by the ORSP are certain fellowships and federal support received by the Agricultural Experiment Station under the Hatch and Smith-Lever Acts, which amounted to \$6.7 million in FY 2006.

[†] In examining Table 5, note that the faculty line of a principal investigator or project director may be divided among several units, or a project may be administered by a unit other than the one in which the principal investigator is salaried or has tenure. In such cases, the full listing of the grant will appear under the unit actually responsible for the administration of the award and a duplicate listing denoted with an "X", will appear under the tenure/salary department.

(1) Effective July 1, 2000, the University began to report the number of awards received as the total number of original awards received plus the number of supplements received from external sources. In prior years, any supplemental funds awarded were added to, and reported as one award with, the original award. This reporting change is not reflected in any previous year's totals cited in this report.

(1) Effective July 1, 2000, the University began to report the number of awards received as the total number of original awards received plus the number of supplements received from external sources. In prior years, any supplemental funds awarded were added to, and reported as one award with, the original award. This reporting change is not reflected in any previous year's totals cited in this report.

**TABLE 5 Summary of Awards by Campus and Administering Unit/Principal Investigator
Fiscal Year 2005-2006**

All Awards are listed by administering unit. Where the administering unit differs from the salary/tenure unit, a duplicate listing denoted with an 'X' appears under the salary/tenure unit. The PI is listed first followed by any Co-investigators.
